Option	Description
	• *Any_Position_Ignore_Punctuation*: This value is similar to the *Any_Position_Consider_Punctuation* option except that decimal separators do not impact the matching process. For example: - Part description: `ACCU 1,4L 29BAR` and `ACCU 29BAR 1.4L` are considered a match even though there is a decimal indicator between the `1` and the `4`. • Same position: Numeric words must match exactly and be in the same position in the string to be considered a match. For example: - `608-782-5000` matches `608-782-5000`, but does not match `782- 608-5000`. Note: For this option to work, you must set the *Compare algorithm* option to *Word*.
Field compare length	Specifies the number of characters in the field to compare.
